Comprehensive Benefits

Cloud Video Conferencing

Zoom offers HD video, audio and screen-sharing for up to 200 video participants, devices or room systems. With multi-screen, gallery view and voice detection support, you can hold a multi-site video conference with over 80% savings compared to other solutions.

Simple Online Meetings

Zoom has all the online meeting features you need - instant or scheduled meetings, screen sharing, remote controls, co-annotation, host controls, private or group chat and recording - but is also much faster and simpler to use than traditional web conferencing solutions.

Group Messaging

Whether you're on the road or at your desk, Zoom provides XMPP/IM group messaging for Mac, PC, tablets, and smartphones. Send online or offline text, image or audio messages to your phone, account, or domain contacts. Zoom also provides presence status and push-to-talk on smartphones.

Industry-leading Innovations

Mobile Collaboration

Zoom increases your productivity by giving you similar experiences across desktop, tablet and mobile devices. Our mobile apps offer screen sharing, remote control, group messaging, co-annotation, and tablet whiteboarding. In addition, you can screen share an iOS app via iOS mirror.

On-Premise Meeting Connector

First cloud service with the ability to run administrative tasks in the public cloud while meeting traffic, including video, voice and data sharing , goes through the private cloud using the on-premise Meeting Connector.

Room Systems Integration

Easily connect with traditional H.323/SIP room systems and enable them to participate in cloud meetings using the Cloud Room Connector.

*Zoom provides a robust set of security features across 5 key elements:
role-based, in-meetings, communications, Meeting and Room Connector and detailed reporting.*
